# Roses *and* Roses

• • •

The only way you can have success growing Roses is to be sure that the stock you buy are healthy field grown plants entirely acclimatized to your particular weather conditions.

In recent years, the practice of offering forced or second grade Roses at very low prices has crept into the rose business. The use of this type of plant has led many to believe they cannot successfully grow Roses.

This thought could not be farther from the truth for Roses, in average soil, are one of the easiest flowers to grow successfully. This statement, of course, depends entirely on the Roses you buy.

You can depend on our Roses to be sturdy field grown plants at home under any climatic conditions. The success of our business depends on the success you have with the plants you buy from us.

## The Best in America

OUR ROSES are all budded, two-year, field-grown, under conditions the most ideal, to be found the world over; backed by experience extending to forty years in Rose growing. We can, therefore, offer our customers a product which is a result of the most favored conditions and cultural skill combined with the utmost hardiness induced by the rigorous Winters of our northern climate.

Mail and express parcels can reach the most distant points in the United States within one week. Direct producer to consumer business offers the best quality at the lowest price.

Our financial reference is the Nooksack Valley State Bank, Everson, Washington.

ORDERS will be filled strictly in rotation as received. When a variety is sold out, another will be substituted UNLESS OTHERWISE INSTRUCTED.

For FALL DELIVERY orders must be in our hands by September 15th. For SPRING DELIVERY, not later than February 15th.

### GENERAL LIST

PRICES: Three plants for \$1.00  
4 to 25, 30c. ea.; 26 to 100, 27c. ea.; over 100, 25c. ea.

If club orders are required to be tagged and mossed individually, there will be an additional charge of 1/2c. for tagging and 1 1/2c. for mossing. Those desiring orders put up this way must specify so on their order

# *Climbing* ROSES

We can think of no more beautiful sight than the climbing Rose on a trellis or arbor in full bloom. A solid blanket of beautifully colored flowers. Below are three of the more popular varieties. Reserve a spot in your garden for these Roses.

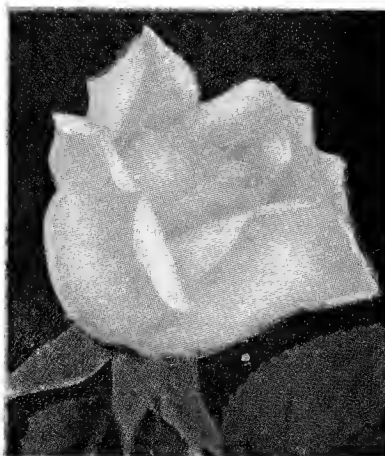

## **Paul's Scarlet Climber**

Intense, fiery scarlet flowers of splendid shape, borne in large clusters. Of vigorous growth.

## **Mme. Gregoire Staechelin**

This new climbing Rose is very distinctive. The open flowers are unusually large, while in the early stage, the buds are long pointed.

## **Dr. W. Van Fleet**

Large flowered, of a dainty pink color. A profuse bloomer during June and July.

# ROSE CULTURE

## SOIL PREPARATION

Roses will grow in any good soil. However, the average soil in our cities and towns is not fertile, so that tilling and feeding is essential. The soil should be dug about 18 inches deep. The top soil and sub soil placed in different piles. Into the sub soil, mix a goodly amount of well rotted cow or horse manure. Into the top soil, stir a mixture of bonemeal and sheep manure.

## PLANTING

Any damaged or broken roots should be cut off with a sharp knife. Prune the larger shoots to 6 or 8 inches and cut out the small weak ones. Never plant if the roots are dry—soak them well. Plant Roses about 18 inches apart at a depth, just covering the bud which is the point from which the branches begin.

## FERTILIZATION

If the original bed is well prepared there will be no need for additional fertilizer for two or three years and then add a mixture of bonemeal and sheep manure. This is spread on the surface and rolled into the soil to prevent being washed away when watered.

## WINTER PROTECTION

Hill up the plants with ordinary garden loam from 8 to 12 inches.

## SPRING UNCOVERING

Do not remove protection until Spring has definitely come. Then remove about one-half the mulch and in two weeks remove the balance.

## PRUNING

About the time they are uncovered, cut off all the dead wood and prune the live wood within a few inches of the ground for a few exhibition flowers and 8 to 12 inches for a quantity of good flowers.

## IN THE SOUTH

Little or no Winter protection is needed for either bush or climbing Roses.
